Sequence 428, Application US/09620405B

Patent No. 6528054

GENERAL INFORMATION:

APPLICANT: Jiang, Yuqiu

APPLICANT: Mitcham, Jennifer L.

APPLICANT: Mitcham, Jennifer L.

APPLICANT: Harlocker, Susan L.

TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR THE THERAPY AND TITLE OF INVENTION: DIAGNOSIS OF BREAST CANCER

FILE REFERENCE: 210121.470C8

CURRENT APPLICATION NUMBER: US/09/620,405B

CURRENT FILING DATE: 2000-07-20

NUMBER OF SEQ ID NOS: 495

SOFTWARE: FRAESEQ for Windows Version 3.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1946 CAGTCATGAGCAGAGCTGAAATTTTAAACAAGTTGAGTACCTCCTTATTCA 1997

New crystal of an extracellular domain of mammalian dipeptidyl-peptidase IV (DPP-IV) useful for identifying or designing inhibitors of DPP-IV

us-10-659-055-2.rng

The present invention describes a crystal (I) of the extracellular domain of mammalian dispetival-peptidase (DPP) 1.4 (S.) Also described:

(I) a co-crystal of the extracellular domain of mammalian DPP-IV and a ligand bound to its active site; (2) a co-crystal of the extracellular domain of mammalian DPP-IV and a ligand bound to its an algand to an allosteric binding of the mammalian DPP-IV and a ligand bound to mammalian DPP-IV and a ligand bound to mammalian DPP-IV and an active site ligand; (6) a co-crystal site in the extracellular domain of mammalian DPP-IV and an active site ligand; (6) a crystal produced by (MI) and (MI); (7) (7) determining the three-dimensional structure of a crystallisting an active site ligand; (6) a crystal produced by (MI) and (MI); (7) determining the three-dimensional structure of a crystallised extracellular domain of mammalian DPP-IV or a machine-readable data and active site being extractions for using the which, when using a machine programmed with instructions for using the data storage material encoded with machine readable data which, when using a graphical three-dimensional structure domain of mammalian DPP-IV comprising the ligand binding active site being defined by as set of points shaving a croom molecular complex comprising at least a portion of the extracellular domain continuate deviation of less than about 1.5 angstrom from points representation by using (I); (10) a pharmaceutical composition (II) and a carrier; (11) an isolated much set of sequence (SQC or mean square deviation the soluble extracellular domain of DPP-IV comprising (I) and a carrier; (11) an isolated much set of sequence (SQC of comprising (I); (10) a pharmaceutical composition; (11); and (12) a polypeptide comprising (I); (11) an isolate continue of sequence (SQC DNO:); (12) a polypeptide comprising (I); (11) an isolate of sequence (SQC DNO:); (12) a polypeptide comprising (I); (11) and a carrier; (11) an isolate of pop-IV activity, (I); is useful for the soluble extracellular domain of pop-IV ac Claim 26; SEQ ID NO 1; 215pp; English

The present invention relates to methods of detecting a prostate cancerassociated transcript in a cell from a patient. The method comprises contacting a biological sample from the patient with prostate cancersasociated polymucleotides (designated PC genes) that selectively chypridise to a sequence that is at least 80% identical to them. The prostate cancer-associated polymucleotide sequences are differentially expressed in prostate tumour tissue or in prostate cancer and are derived from the tissues of various organisms such as humans or other mammals. C from the tissues of various organisms such as humans or other mammals. C diagnosing and treating prostate cancer in mammals. The prostate cancer associated genes are useful for diagnosing or treating prostate cancer. C associated genes are useful for diagnosing or treating prostate cancer. C inhibit prostate cancer. The nucleic acid sequences are particularly useful in gene thorapy, as a vaccine or in antisense applications. ABK92115-ABK92263 represent prostate cancer in antisense applications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        489

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention comprises a method of identifying a subject that is susceptible to developing angiodemic conditions during a course of treatment. The method of the invention involves administering an angioteensin converting enzyme (ACB) inhibitor or a vasopeptidase in hibitor and determining dipeptidals IV (DPP IV) enzyme activity or aminopeptidase P (APP) enzyme activity. The method of the invention is useful for identifying/diagnosing susceptibility to developing angiodemic conditions during a course of treatment involving the administration of an ACB inhibitor or a vasopeptidase inhibitor. The method is particularly useful during the treatment of a subject that is in need of or taking an ACB inhibitor and/or a vasopeptidase inhibitor, which are commonly used in the treatment of hypertension, diabetes, cardiac disease and renal diseases. The present DNA sequence encodes the human dipeptidyl peptidase IV (DPP IV)

The present invention describes a method (M1) for delivering an therapeutic agent to a specific tissue, comprising administering an amount of a therapeutic complex comprising a digad which binds to a computation of the bissue-specific luminally expressed protein, a therapeutic group, and linker which links the group to the ligand. Tissue-specific endothelial nembrane proteins from the present invention can have antibacterial, circuide, fungicide, antiparasitic, anticonvulsant, neuroleptic, virucide, fungicide, antiparasitic, anticonvulsant, neuroleptic, orticatic, antiparkinsonian, nootropic, neuroprotective, antiasthmatic, antidiabetic, hypotensive, nephrotropic, antiarthritic and antidiabetic, hypotensive, nephrotropic, antiarthritic and antidiabetic, hypotensive, nephrotropic, antiarthritic and antistensulate complex may be used to treat or diagnose any disease for therapeutic complex may be used to treat or diagnose any disease for which a tissue- or organ-specific treatment would be efficacious, such as in cases of infections (e.g. bacterial, viral, fungal and parasitic), epilepsy, schizophrenia, cancer, Parkinson's disease, Alzheimer's arthritis, and inflammatory bowel disease. The present sequence encodes a human liver dipeptidyl peptidase IV (DPP4), which is used in an example from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                               Delivering a therapeutic agent (e.g. immunosuppressant) to a specific tissue, comprises administering an amount of a therapeutic complex comprising a therapeutic group, a ligand that binds to a tissue-specific protein, and a linker.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AGTCGCAAAACTTACACTCTAACTGATTACTTAAAAAATACTTATAGACTGAAGTTATAC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             음
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ò
                                                                                                                                                                                                                                                                                                                                The present invention describes a predictor set comprising a plurality of polynucleotides or polypeptides whose expression pattern is predictive of the response of cells to treatment with a compound that modulates protein tyrosine kinase activity or members of the protein tyrosine kinase activity or members of the protein tyrosine kinase cotivity or members of the protein tyrosine kinase cotivity or members of the protein tyrosine kinase correlating the activity of cells, comprising obtaining a sample of cells, concellating the activity of the cells, comprising a sample of cells, correlating the expression of the markers to the compound's ability to correlate the activity of the cells, (2) a plurality of cell innes for identifying polynuclectides and polypeptides whose expression levels correlate with compound sensitivity or resistance of cells associated with a disease state, and (3) identifying polynuclectides and collypeptides that predict compound sensitivity or resistance of cells associated with a disease state, compounds ensitivity or resistance of cells compounds, analysing the expression pattern of a microarray of polynuclectides or polypeptides, and selecting the polynuclectides or polypeptides, and selecting collypeptides that predict the sensitivity or resistance of cells associated with a disease state by using the expression pattern of the microarray. The polynuclectides and polypeptides are useful in predicting the compounds that interact with protein tyrosine kinases and/or protein tyrosine kinase pathways. These may be used in determining drug sensitivity in patients to allow the development of individualized cancer; based on patient resistion of the present invention.

The invention relates to nucleic acids and proteins (ADN38683-ADN40064)

whose expression is upregulated or downregulated in specific cancers or other diseases auch as angioganic or fibrotic disorders, and to methods of determining the presence or absence of a pathological cell in a content on the invention or by detecting a nucleic acid at least 80% identical to those of the invention or by detecting a polypeptide of the invention. The invention also relates to expression vectors and host cells comprising a nucleic acid of the invention; use of such antibodies for drug targeting; polypeptide of the invention; use of such antibodies for drug targeting; cand methods of screening for modulators of activity or expression of the polypeptides and nucleic acids. The nucleic acids, polypeptides, antibodies and methods are useful for diagnosing, prognosing and treating antibodies and other conditions such as psoriasis, ischemaia, heart disease, atherosclerosis, inflammatory diseases, autoimmune diseases, retinal neovascularistaion syndromes, scarring and uterine fibroids. They may also be useful in wound healing and in contraception. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       190 AGTOGCAAAACTTACACTCTAACTGATTACTTAAAAAATACTTATAGACTGAAGTTATAC 249
